

## State Safety Data Quality

SafeStat identifies and prioritizes carriers for FMCSA and State safety improvement and enforcement programs based in part upon safety and compliance data provided to FMCSA by the States. In particular, State-reported motor carrier crash and inspection data are used by SafeStat. Although there is variability among States in the reporting of crash and inspection data, an Effectiveness Study of SafeStat has shown that reported data are sufficient to identify high-crash risk carriers for FMCSA programs. In order to disclose the nature of this variability, State crash and inspection reporting has been evaluated below based upon data completeness, timeliness and accuracy.

To measure the completeness of the data, 2003 State crash data in FMCSA's Motor Carrier Management System (MCMIS) has been compared to NHTSA's 2003 Fatality Analysis Reporting System (FARS) data. To measure timeliness and accuracy, State crash and inspection records in MCMIS have been evaluated based on a September 24, 2004 snapshot of the events that occurred July 1, 2003 through June 30, 2004.

This evaluation will be updated quarterly to reflect improvements in crash and inspection reporting.

Summary Report: State Rating of Crash and Inspection Reporting (as of September 24, 2004)
